Software Requirements Specification for a Collaboration Platform for Project Studies

Report for Project Study

Nan Jiang

B.Sc. Management and Data Science
at TUM School of Management of the Technical University of Munich

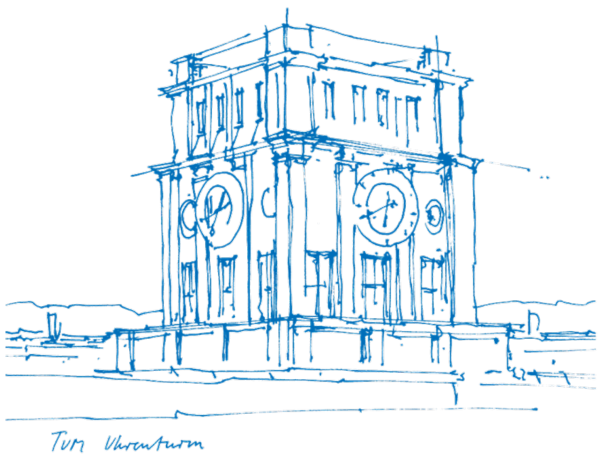
Jasmin Yalçın

B.Sc. Management and Data Science
at TUM School of Management of the Technical University of Munich

Examiner
Prof. Dr. Miriam Bird
Chair of Entrepreneurship and Family Enterprise

Supervisor
Lorenz Tidow
Ph.D. Candidate and Research Associate

Submission date
16.08.2026



Contents

1. Introduction 4
   1.1. Purpose of this Document 4
   1.2. Project Background and Motivation 4
   1.3. Scope of the Platform 4
   1.4. Definitions, Acronyms, and Abbreviations 4
   1.5. Document Overview 4
2. Literature review 4
   2.1. Requirements Engineering Grounding 4
   2.2. Academia-Industry Collaboration 6
   2.3. Positioning This Project Relative to the Literature 6
3. Research Approach and Limitations 6
   3.1. Interview Methodology (stakeholder groups, question design) 6
   3.2. Sample Overview and Limitations (explicit note on data thinness, especially company-side) 6
   3.3. From Interview Insights to Requirements (how findings were translated, requirements framed as informed proposals, not validated findings) 6
4. Overall Description 6
   4.1. Product Perspective 6
   4.2. Stakeholder Groups and Their Roles (students, professors/supervisors, companies) 6
   4.3. Assumptions and Constraints 6
   4.4. Scope Boundary: TUM-Specific Focus (explicit justification: administrative/ collaboration processes differ significantly across universities, so single-institution depth was prioritized over shallow generality) 6
   4.5. Transferability to Other Institutions (brief discussion of what would need to adapt for other universities) 6
   4.6. Out-of-Scope Items (e.g. backend functionality not prototyped) 6
5. Stakeholder Needs (Pain Points) 6
   5.1. Overview by Stakeholder Group 6
   5.2. Student Pain Points 6
   5.3. Professor/University Pain Points 6
   5.4. Company Pain Points 6
   5.5. Cross-Cutting Findings (pain points recurring across all three groups) 7
6. Functional Requirements 7

6.1. Prioritization Scheme (MoSCoW, criteria defined here. Requirements grounded in cross-cutting pain points and structurally independent of TUM-specific administration are prioritized higher) 7
6.2. [Functional Area 1] 7
6.3. [Functional Area 2] 7
6.4. [Functional Area 3] 7
6.5. [Functional Area 4] 7
7. Non-Functional Requirements 7
7.1. Usability 7
7.2. Security and Data Privacy 7
7.3. Maintainability / Extensibility 7
8. System Models 7
8.1. Use Case Diagram(s) 7
8.2. Key User Flows 7
9. Traceability and Prototype Alignment 7
9.1. Traceability Table: Interview Insight → Pain Point → Requirement ID 7
9.2. Prototype Coverage Table: Screen → Requirement ID 7
9.3. Requirements Without Prototype Coverage (brief justification) 7
10. Assumptions, Risks, and Open Issues 7
11. Appendices 7
12. Declaration of authorship 7
References 8

1. Introduction

1.1. Purpose of this Document

1.2. Project Background and Motivation

1.3. Scope of the Platform

1.4. Definitions, Acronyms, and Abbreviations

1.5. Document Overview

2. Literature review

2.1. Requirements Engineering Grounding

- **Choice of standard (29148 over 830):**

This specification follows ISO/IEC/IEEE 29148:2018 [1], the current international standard for requirements engineering, which supersedes IEEE 830-1998 [2]. The predecessor addressed the specification document alone, whereas 29148 covers the requirements process as a whole, including elicitation, analysis and validation. This is the more suitable frame here, since much of what follows concerns how requirements were derived from stakeholder interviews and how strongly each is supported. The standard is applied in scaled-down form appropriate to a single-semester project and extended with a literature review section to meet the academic requirements of a project study report.

- **Interview-based elicitation as a method:** you used semi-structured interviews to elicit requirements — RE literature on qualitative elicitation techniques would justify why interviews are a legitimate elicitation method in the first place, not just describe what you did.
- **Small-sample / saturation literature:** this is probably your most useful citation. There's a body of work on thematic saturation (how many interviews are "enough" to start seeing repeated patterns) — citing this lets you say your sample, while small, isn't arbitrary; it lets you argue "we observed convergence on X pain point by interview 5" with a methodological backing, rather than just apologizing for n.
- **Traceability practices:** Section 9 assumes traceability matters — a citation on why requirements traceability is standard RE practice (and what goes wrong without it) turns that section from "our professor asked for this" into "this is recognized best practice, here's why."
- **Prioritization schemes:** you're choosing MoSCoW for Section 6.0 — citing why MoSCoW (vs. Kano, cost-value analysis, AHP) fits a small-team, exploratory, resource-constrained context justifies the choice rather than treating it

as arbitrary/default.https://www.researchgate.net/publication/220630837_Time_boxing_planning_buffered_moscow_rules

2.2. Academia-Industry Collaboration

2.3. Positioning This Project Relative to the Literature

3. Research Approach and Limitations

3.1. Interview Methodology (stakeholder groups, question design)

3.2. Sample Overview and Limitations (explicit note on data thinness, especially company-side)

3.3. From Interview Insights to Requirements (how findings were translated, requirements framed as informed proposals, not validated findings)

4. Overall Description

4.1. Product Perspective

4.2. Stakeholder Groups and Their Roles (students, professors/supervisors, companies)

4.3. Assumptions and Constraints

4.4. Scope Boundary: TUM-Specific Focus (explicit justification: administrative/collaboration processes differ significantly across universities, so single-institution depth was prioritized over shallow generality)

4.5. Transferability to Other Institutions (brief discussion of what would need to adapt for other universities)

4.6. Out-of-Scope Items (e.g. backend functionality not prototyped)

5. Stakeholder Needs (Pain Points)

5.1. Overview by Stakeholder Group

5.2. Student Pain Points

5.3. Professor/University Pain Points

5.4. Company Pain Points

5.5. Cross-Cutting Findings (pain points recurring across all three groups)

6. Functional Requirements

6.1. Prioritization Scheme (MoSCoW, criteria defined here. Requirements grounded in cross-cutting pain points and structurally independent of TUM-specific administration are prioritized higher)

6.2. [Functional Area 1]

6.3. [Functional Area 2]

6.4. [Functional Area 3]

6.5. [Functional Area 4]

7. Non-Functional Requirements

7.1. Usability

7.2. Security and Data Privacy

7.3. Maintainability / Extensibility

8. System Models

8.1. Use Case Diagram(s)

8.2. Key User Flows

9. Traceability and Prototype Alignment

9.1. Traceability Table: Interview Insight → Pain Point → Requirement ID

9.2. Prototype Coverage Table: Screen → Requirement ID

9.3. Requirements Without Prototype Coverage (brief justification)

10. Assumptions, Risks, and Open Issues

11. Appendices

12. Declaration of authorship
